Saar Yaniv

JUNIOR PRACTICAL SOFTWARE ENGINEER

I'm a self-learner, with a lot of motivation, and excellent at working in a team and alone.

I'm looking in my first job, to utilize my skills, grow as a developer, and learn new things.

I like to find problems in my everyday life and try to solve them by building new projects that will solve them.

Projects

App for meeting new friends

An App, for meeting new friends based on shared interests and living areas,

by using Firebase's real-time database for chat and for the data stored.

This project is for my final project, during my studies.

App for getting notifications when a new grade is uploaded

An App that sends push messages when a new grade is uploaded to the School's website because my school doesn't have that functionality.

I used for building this app, web scrapping to enter my School's website.

App for currency exchange

In the app, I used an API with a key to get a response from the API about the currencies and then parsing it to a class that I built, and then I can get the exchange rates between two currencies.

App for managing Football Players and Clubs

An app for managing Football Players and Clubs based on C# Windows Form and MongoDB, with using a shared collection with ids of Football Players and Clubs for a combination of information to display in the form, uploading images, and more...
